of CoM to 2-oxoalkyl thioesters of CoM. The enzyme highly specific for the R enantiomers.

CATALYTIC ACTIVITY: 2-(R)-hydroxypropyl-CoM + NAD(+) = 2-
OXOPOPYL-COM + NADH.

PATHWAY: Epoxypropane carboxylation pathway; second step.

PATHWAY: Propene catabolic pathway via epoxypropane
carboxylation; third step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MILJ3 HUMAN STANDARD; PRT; 4911 AA.

15-MAR-2004 (Rel. 43, Last annotation update)

Myeloid/Jymphoid or mixed-lineage leukemia protein 3 homolog (Histone-lysine N-methyltransferase, H3 lysine-4 specific MLL3) (EC 2.1.1.43)

(Homologous to ALR protein).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SUBUNIT: Homodimer.
-!- INDUCTION: By aliphatic and chlorinated alkenes.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Cell. Conctivator complex of nuclear receptors, involved in
transcriptional coactivation. MLL3 may be a catalytic subunit of
this complex, which weakly methylates Lys 4 of histone Hay be
this complex, which weakly methylates Lys 4 of histone Hay be
conctivator activation. MLL3 may be a catalytic subunit of
this complex, which weakly methylational activation. May be
involved in leukemogenesis and developmental disorder.
Cell ALL CATALYTIC ACTIVITY: S-adenosyl-L-methylational disorder.
Cell SUBUNIT: Belongs to the ASC-2/NCOA6 complex (ASCOM), which
contains ASC-2/NCOA6, the returbolastoma-binding proteins
Cell SUBCELLULAR LOCATION: Nuclear (Probable).
Cell SUBCELLULAR LOCATION: Nuclear (Probable).
Cell ALLERNATIVE PRODUCTS:
Cell ALLERNATIVE Splicing; Named isoforms=2;

US-05-582-934-2

Sequence 2, Application US/09582934

Patent No. 6617428

GENERAL INFORMATION:

TITLE OF INVENTION: Human CMRF-35-H9 receptor which binds IGM

TITLE OF INVENTION: Human CMRF-35-H9 receptor which binds IGM

TITLE OF INVENTION: Human CMRF-35-H9 receptor which binds IGM

TITLE OF INVENTION: Human CMRF-35-H9 receptor which binds IGM

CURRENT APPLICATION NUMBER: US/09/582,934

CURRENT FILING DATE: 2000-07-07

PRIOR PILING DATE: 1998-01-14

PRIOR APPLICATION NUMBER: PCT/NZ99/00003

the polymucleotide sequences given in AAC55190 to AAC55235 encode the human secreted proteins given in AAB32371 to AAB32484. Human secreted proteins given in AAB32371 to AAB32484. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; immunostimulant antiprollferative; cardiant; antiarrhythmic; antiviral; antibaccerial; antiarratic; neuroprotective; notropic; antihiflammatory; antiargiogenic; anti-HIV; and antiarreriosclerotic. The polymucleorides and polypeptides, or their agonists and antagonists (e.g. cancer, autoimmune diseases), disorders of haemacopoietic cells, blood protein disorders (e.g. agammaglobulinaemia), hyperproliferative diseases (e.g. cauchers edisease), cardiovascular disorders (e.g. congenital heart defects, pulmonary arresia, arrhythmias, ischaemia), andiogenesis related disorders (e.g. Crohn's disease, atherosclerosis), neurological diseases (e.g. Crohn's disease, atherosclerosis), neurological diseases (e.g. Alzheimer's disease, atherosclerosis), infectious diseases (e.g. dungal diseases). AAF81741 to AAF81777 encode the human membrane associated proteins antihilaumahory, anticonvulsant, immunosuppressive, antidiarrheic and antiatreriosclerotic activities, which can be used in gene therapy.

MEMAPS and agonist of MEMAPS can be used to treat a disease or condition associated with decreased expression of functional MEMAP and antagonists of MEMAPs are used to treat a disease or condition associated with coverexpression of functional MEMAP. These disorders include cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal cisorders. The MEMAP polymucleotides and proteins are also used for the disorders. The MEMAP polymucleotides and proteins are also used for the disorder include cancer, inflammation, atherosclerosis, epilepsy and diarrhoea. MEMAP proteins can be used to screen for compounds which specifically bind MEMAP including antibodies, oligonucleotides, proteins and small molecules. MEMAP polymucleotides can be used to prepare transgenic animals which can be studied to provide information concerning human disease. Anti-MEMAP antibodies are useful in immunoassays for the concerning to MEMAP protein and can be used as antagonists to treat or prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP can be delivered to target cells with genetic abnormalities with respect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated polypeptide with a human membrane associated protein sequence is useful for the diagnosis, prevention and treatment of cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

(GETH ) GENENTECH INC

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for treating a PRO related disorder, cancer, colon cancer, breast tumour, prostate tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or proliferation of, or gene expression, in periotic cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have

ö
polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polymucleotides are useful for preparing a medicament useful in the diagnosis and treatment of tumours. Anti-FRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUR0739-ABUR0860 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention describes an isolated nucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nucleotide encoding any of 122 PRO (secreted and transmembrane) polypeptides whose sequences are fully defined in the specification; or (b) any of 122 nucleotide encoding sequences fully defined in the specification; or (b) any of 122 nucleotide sequences. The PRO polypeptides or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting tumours or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour. rectal tumour, colon tumour, prostate tumour, rectal tumour, or liver tumour) in a mammal, for stimulating the release of TNF-alpha from human blood, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation. The PRO nucleic acid or polypeptide is also useful in drug screening, partitularly as targets for therapeutic intervention in these diseases, and in the diagnostic determination of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome confine therapeutic may also be used in gene therapy, particularly for replacing a defective screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective confine secreted and canno cald sequence of a novel human secreted and
                                                    New genes, and its encoded secreted and transmembrane polypeptides, useful for stimulating Tumor Necrosis Factor alpha, or chondrocyte or pericyte proliferation, especially for treating lung tumors, arthritis or

120 120 180 gene therapy; cardiovascular disorder; endothelial disorder; angiogenic disorder; cardiac hypertrophy; trauma; cancer; age-related macular degeneration; atherosolerosis; hypertension; arterial restenosis; rheumatoid arthritis; angina; myocardial infarction; thrombophlebitis; lymphangitis; tumour angiogenesis; breast carcinoma; liver carcinoma; wound healing; chromosome mapping; gene mapping. 9 9 The invention describes one hundred and eighty seven nucleic acids encoding novel human secreted and transmembrane (PRO) polypeptides. The PRO nucleic acids, polypeptides, agonites and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, agerelated macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, unour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO nucleic acids have applications in chromosome and gene mapping. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel isolated PRO protein encoding nucleic acid of the invention may be useful for preparing PRO polypeptides and anti-PRO antibodies for detecting the presence of a tumour in ammal. Purthermore, the molecules of the invention may be useful for stimulating proliferation or gene expression in perioryte cells, the release of tumour necrosis factor (TMP)-alpha from human blood, the proliferation of informal human dermal fibroblast cells and for inhibiting the proliferation of normal human dermal fibroblast cells. Finally, the molecules may be utilised during gene therapy. The current sequence is that of the human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gerritsen ME, Goddard A, Godowski PJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel isolated nucleic acid encoding a fully defined PRO polypeptide. The molecules of the invention may be useful for stimulating proliferation or gene expression in pericyte cells or the release of TNF-alpha from human blood. Other possible uses include the stimulation or inhibition of chondrocyte proliferation or differentiation, the stimulation of human dermal fibroblast cell proliferation and the detection of the presence of a tumour within a mammal. Furthermore, the nucleic acid may be useful for the manufacture of a medicament for diagnosing or treating a tumour within a mammal or for measuring or detecting the expression of an associated gene, as well as during gene therapy. The current sequence is that of the human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ·,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DCKILVKTSGSEQEVKRDRVSIKDNQKNRTFTVTMEDLMKTDADTYWCGIEKTGNDLGVT 120

The invention relates to an isolated nucleic acid encoding a PRO polypeptide. Nucleic acids that encode PRO can be used to generate either transpencia animals or knock-out animals useful in developing and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy for replacing defective gene, in chromosome identification, as chromosome markers, or in generating probes to isolate full length PRO cDNA. The PRO polypeptides are useful for chondrocyte stimulation, TNP-alpha stimulation, human dermal fibroblasts stimulation and for detecting the presence of tumour in an mammal. The PRO polypeptides are useful as molecular markers for protein electrophoresis and the isolated mucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO and in affinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents the amino acid sequence of a human secreted/transmembrane PRO polypeptide
                                                                                                     240

Governed by information received from other cells and the immediate governed by information received from other cells and the immediate convironment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor equances of novel human membrane bound receptors and proteins of the squand interactions. The current invention provides the amino acid squand interactions. The current invention as in the blocking of receptor squand interactions. The current invention as in the blocking of receptor invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a manufacture of a tumour asy be useful for measuring or detecting the amino acid sequence of a human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention describes an isolated PRO (secreted and transmembrane)

CD polygeptide (1): PRO982, PRO1160, PRO1187 or PRO1339 polypeptide are useful cusful for stimulating the proliferation of or PRO1339 polypeptide are useful cor stimulating the proliferation of differentiation of chondrocyte cells. PRO357, PRO357, PRO1272 or PRO4465 polypeptide are useful cor stimulating the proliferation of differentiation of chondrocyte cells. PRO357, PRO357, PRO1366 or PRO4419 polypeptide are useful cor useful for stimulating the release of tumour necrosis factor (TNF)- alpha from human blood.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO351, PRO355, PRO1255, PRO1366 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (INF)-

alpha from human blood. PRO982, PRO157, PRO1366, PRO1419, PRO1419,

PRO147, PRO137, PRO526, PRO363, PRO531, PRO1071, PRO1019, PRO1416,

PRO1055, PRO1181, PRO4126, PRO1065, PRO1093, PRO1244, PRO1412, PRO1412,

PRO1349, PRO1376, PRO1347, PRO1305, PRO1779, PRO1340, PRO1369,

PRO186, PRO1376, PRO1341, PRO1305, PRO1779, PRO1341, PRO1361,

PRO186, PRO1376, PRO4341, PRO1301, PRO1479, PRO1916, PRO1386,

PRO19940, PRO0936 or PRO10096 polypeptide are useful for

stimulating the proliferation of normal human dermal fibroblast cells.

PRO132, PRO5725, PRO7184, or PRO7425 POlypeptide are useful for

inhibiting the proliferation of normal human dermal fibroblast cells.
factor alpha release;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gerritsen ME, Goddard A, Godowski PJ;

polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO puppeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the RO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful correcting useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        o,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              22-MAY-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADB73177;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61
```

```
The invention describes an isolated PRO (secreted and transmembrane)

polygeptide [1]. PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

cuseful for stimulating the proliferation of or gene expression in

periovic cells. PRO357, PRO222, PRO1227 or PRO4405 polypeptide are useful

cor stimulating the proliferation of differantian of chondrocyte

cells. PRO357, PRO525, PRO125, PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TMF) -

are useful for stimulating the release of tumour necrosis factor (TMF) -

are useful for stimulating the release of tumour necrosis factor (TMF) -

The invention describes an isolated PRO (secreted and transmembrane)

C polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

C useful for stimulating the pro21 feration of or gene expression in

C pericyte cells. PRO237, PRO229, PRO1272 or PRO4405 polypeptide are useful

E for stimulating the pro11feration or differentiation of chondrocyte

C cells. PRO231, PRO325, PRO1155, PRO1166 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TMF)-

alpha from human blood. PRO982, PRO357, PRO126, PRO1419, PRO214,

CC alpha from human blood. PRO982, PRO357, PRO126, PRO1419, PRO214,

CC RRO1478, PRO3134, PRO826, PRO363, PRO3136, PRO1411, PRO1411, PRO1309,

CC PRO1343, PRO1376, PRO4301, PRO1801, PRO1371, PRO1340, PRO1320,

CR PRO1341, PRO325, PRO1361, PRO1801, PRO4341, PRO1367,

CR PRO1341, PRO5229, PRO7144, PRO1801, PRO4321, PRO4408,

CC Stimulating the pro11feration of normal human dermal fibroblast cells.

CR PRO522, PRO522, PRO7154, or PRO4425 polypeptide are useful for inhibiting the pro11feration of normal human dermal fibroblast cells.

CR polypeptides such as PRO6004, PRO4981, PRO4378, PRO5372, etc.,

are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample this indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or typing, or as therapeutic agents. A polymuclectide (II) is oncoting (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful for generating treagners. PRO357, PRO229, PRO127 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeptides encoding them.

Cransmembrane polypeptides and the PRO polymucleotides encoding them. diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour the tumour of tumour or tiver tumour) in a mammal, for stimulating the proliferation of congression in periotyte cells or for stimulating the proliferation of congram human dermal fibroblasts. The PRO nucleic acids are useful as comman probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which reagents, in gene therapy, in chromosome identification, as chromosome may be used in the development and screening of therapeutically useful creagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, such as periotyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO attibodies, such as periotyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2. Application US/09582934;
Sequence 2. Application US/09582934;
Patent NO. 6617428
GENERAL INFORMATION:
APPLICANT: Hart, Derek N.J.
TITLE OF INVENTION: Human CMF-35-H9 receptor which binds IGM
FILE REFERENCE: HART
CURRENT FILING DATE: 1000-07-07
PRIOR PAPLICATION NUMBER: 329582
PRIOR APPLICATION NUMBER: 329582
PRIOR FILING DATE: 1999-01-14
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 2
LENGTH: 298
HAVE THE SECTION NOTE: 1000-0003
HAVE THE SECTION NUMBER: PATH NOTE: 1000-0003
HAVE THE SECTION NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH NUMBER: PATH N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FEATURE:
COTHER INFORMATION: Description of Artificial Sequence: we really
COTHER INFORMATION: don't know.

7. OTHER INFORMATION: don't know.
